Astrologic defined and defended.

Astrologic is an Art which teacheth to know the mind or meaning of the Starres: For as in Astronomic we are taught to measure their motions, and find out their Aspects and Configurations; so by Astrologic we are taught to judge of their effects.

Astrologic then is an Art, which teacheth by the Motions, Configurations, and Influence of the Signes, Starres, and Celestiall Planets, to prognosticate of the naturall effects and mutations to come in the Elements, and in these inferior and Elementarie Bodies. Which definition contains not onely the causes which concurre to the constitution of the nature and essence of Astrologie; but doth also expresse the end or finall cause to which all the Precepts of the Art are to be referred.

The Scripture speaketh not against the lawfull knowledge and practise of this Art, but granteth the Heavens and Starres to be both occasions and causes, as well as signes of future events. For it is certain that the same thing may be both a Signe and a Cause: a Cause as it worketh to an effect.

effect; and a Signe, as being presented to the sense, it leadeth us to the knowledge of the effect: And therefore when the Starres are called Signes, their causallitie is not expressed. Howbeit in some things, when they work upon a subject not immediately but by accident, they be then occasions rather then causes.

In Genesis, Chap. 1. vers. 14. it is said, *And let them be for Signes, and for Seasons, and for Dayes, and for Years.* Out of which words, rightly expounded, may be gathered; First, that the Starres by a divine ordination, were set in the Heavens to be Signes of future events: wherefore it is said, *Let them be for Signes.* Secondly, we learn hence, that they were appointed to be (as it were) heavenly clocks, and remarkable measures, by their motions defining Time and the parts thereof, as Dayes, Weeks, Moneths, and Years. And therefore it is also added, *And let them be for seasons, and for dayes, and for years.* To which of Moses, may be added that of Jeremie, in the tenth Chapter and the second verse; where, when the Prophet commands the people that they should not learn the way of the Heathen, he calleth the Stars (as Moses before) *The signes of heaven.* From whence Melancthon, that excellent divine, hath gathered; that the Prophet there doth not onely name them *Signes*, but also sheweth that they were set to be signes of portending something. For (saith he) Jeremie doth not say that the Signes of heaven be nothing; but be not afraid of the Signes of heaven. Yea, when he names them Signes, he affirms them to portend something. Thus be. And Luther also on that before mentioned in the first of Genesis, writeth thus; Moses (saith he) plainly affirmeth that the Moon, with the Sunne and starres, were placed in the firmament of heaven, that they should be for signes of future events, as experience teacheth us in Eclipses, great Conjunctions, Meteors, & the like. To which may be added the testimonie of Philo Judeus (a man (as some say) familiar

with Peter the Apostle, and Mark the Evangelist) who, in his book *De Mundi fabricatione*, expounding these words, *Let them be for Signes*; saith, They were created not onely that they might fill the World with their light, but also that they might be for signes of future things. For by their rising, setting, defections, apparitions, occultations, and other differences of motion, they teach men to conjecture of the event of things.

Beside, had the heavens and starres no force at all, the Scriptures would never distinguish between the sweet influences of the *Pleiades*, and the binding virtues of *Orion*: but the Scripture makes such a distinction; therefore the Starres have their power, and so are not Signes alone, but causes also, working (according to that power which God hath given them) to produce an effect. And so it is written in Job 38. 31. *Canst thou (saith God to Job) bind the sweet influences of the Pleiades? or loose the bands of Orion?* by which speech the Almighty doth not onely shew that the starres have their virtues, but also declare that their power and virtue is such as no man on earth is able to restrain, unloose, or bind it: The like to this is also in Deuteronomie, chap. 33. 14. in which place we do expressly find that the Sunne and Moon have power to thrust forth the fruits of the earth. And in Hosea 2. 21. *I will (saith God) bear the heavens, and the heavens shall bear the earth*, &c. Where we see that the vegetation of the fruits of the earth, dependeth not upon one or two constellations, but upon the whole heavens: and therefore there is no starre there but hath its virtue, power, and influence. For as it is with herbs growing on the ground, so with starres moving in the skie; viz. that as herbs have their naturall qualities and operations, so the starres likewise work on this inferiour world by their qualities and naturall virtues, squaring and measuring their operation according to the matter whereon they work.

Also were the starres and lights without power, the
Scriptures

Dove 1652.

Scriptures would never tell us of their dominion over the earth: but the Scripture speaketh of their dominion: therefore they be not destitute of power and virtue. The *minor* is proved in the 2 Kings 17. 16. and chap. 21. 3. and chap. 23. 5. Jeremie 19. 13. Zeph. 1. 5. Gen. 2. 1. and in Acts 7. 42. For in all these places the holy Ghost calleth the *Starres*, *the host of heaven*; thereby amplifying the divine power of God by the force and power of these his glorious creatures: which is further confirmed by that in the song of Deborah, Judges 5. 20. where it is said expressly, that *The starres fought from heaven, the starres in their courses fought against Sisera*.

And for the searching into these things, thereby to be instructed concerning the event of such things as are thereunto belonging, the Scripture again hath said, that *the works of the Lord are great, and sought out of those who have pleasure therein*, Psalm 111. 2. We find therefore, that the children of Issachar are spoken of as men of eminencie, in regard that they had understanding of the times, to know what Israel ought to do; as it is in the 1. Chron. 12. 32. Moses and Daniel are commended likewise for their education and skill; the one, in the learning of the Egyptians; the other, in the learning of the Chaldeans; as we read in Acts 7. 21. and in Daniel 1. 17. And before both these was the Patriarch Abraham, who is recorded by the Ancients to have been excellent in this kind of Science. Nor was Noah but well skilled in it: as Josephus the Jew, and Berosus the Chaldean have told us.

I doubt not therefore, but that the Signes of Heaven may lawfully enough be looked into, and judgement be given of future events: provided that they who practise this Art, defend it not by way of fatall necessity. For if it should be either practised or defended after that manner, then neither could the God of heaven and

earth be allowed to work any thing in this world otherwise then by the course of nature, nor could the actions of men be exempted from coaction, but be absolutely subject to the dominion of the Starres; which is false. He therefore that will have any thing to do with this Art of Astrologie, must beware, that neither more be given unto the Heavens then unto him who made them, nor more unto them being made, then he who made them gave them: For as Gods power is absolute, so for the power of the starres it can reach no further into the actions of men, then to work them up to an inclination. For in such cases as these, *agunt, non cogunt*, is all that may be said. But in other cases their operation is more direct and agreeable to their power, and therefore the more absolute: and yet to think that the predictions here should therefore never fail in the event, is but an unsound conclusion. For it is certain, that the like portion or power of Qualities cannot alwayes stirre up or work *ad idem*, but may sometimes receive either intention or remission, according to the indisposed aptnesse of the subject, the Elements or Elementary bodies not alwayes admitting of their power alike. Beside, Universall and particular causes do many times differ, and then the one hinders the operation of the other.

As for example; Particular causes (as the conjunction of *Venus* and the *Moon*, or some such like meeting) may promise rain, snow, or sleet, when Universall causes (which are not so easily seen) do often turn it into more fair and warm weather. And so also particular influences may seem to work upon such or such humours, and thereupon make the bodie subject to this or that sicknesse, and the mind inclined to this or that action: howbeit it may so happen, that nature may be at this time so abstrusely shut up, that what we see not, may over-power and work beyond what we see.

I speak not this to affright any from searching into the causes of things, but rather to shew that a man busied herein had need have his wits about him, and his eyes in his head, otherwise his judgement may fail him even in things wrought by the course of nature. My conclusion therefore is,

Felix qui potuit rerum cognoscere causas.

January hath xxxi dayes.

New moon the first day, 46 min. past 4 in the morning.

First quarter the 7 day, 38 minutes past 9 at night.

Full moon the 15 day, 4 minutes past 3 in the afternoon.

Last quarter the 23 day, 13 minutes past 7 at night.

New moon the 30 day, 13 minutes past 3 in the afternoon.

C

Of

Of the Eclipses this year.

THere will be this year four Eclipses, two of the Moon, and two of the Sun; and three of them may be seen in our Horizon, if clouds hinder not: namely, both those of the Moon, and the first of the Sunne. They be all of them great Eclipses, and terrible, especially that of the Sun, the oldest man alive scarce remembering the like.

But to speak of them severally. The first that presenteth it self is an Eclipse of the Moon on the fifteenth day of *March*: the beginning of it is at 47 minutes past one in the morning; the middle at 24 minutes past three; and the end at one minute past five: so that the whole time, from the beginning to the end, is three houres and fourteen minutes. At the middle of this Eclipse the Moon is in the eighth house of the Heavens in *Domo mortis*, and in the fifth degree and sixteen minutes of *Libra*. *Saturn* and *Venus* are found to rule the place eclipsed, and *Mars* the Mid-heaven: the effects will continue 3 moneths and 7 dayes, viz. untill the 20 day of *June*; and will manifest themselves most of all in those places which be under *Libra*, *Gemini*, and *Aquarius*. *Proclus* saith, that if the Moon (as now) be eclipsed in the first Decade of *Libra*, it causeth hail and other foul tempests.

The next is that great and terrible Eclipse of the Sunne before mentioned, and is in the same moneth with the former; the Omen therefore is so much the worse: *Finis enim in mundo multa incommode, quando erit in uno mense triusque Luminaris Eclipsis: et precipue in his locis quibus est significatio eorum specialis*; as *Hermes* noteth. This E-
clipse

eclipse will be on the 29 day of *March* being Monday, and beginneth at 33 minutes past 8 in the forenoon: the middle of it at 47 minutes past 9 (at which time the Sunne will be little lesse then totally darkned) and the end will be at one minute past eleven: so that the whole time, from first to last, will be two houres and 18 minutes. At the middle time (being the time of greatest obscuritie) the Luminarie eclipsed will be upon the Cuspis of the eleventh House, in the 19 degree and 26 minutes of *Aries*: which because it is as it were in the last Decade of that signe, signifieth (as *Proclus* saith) sadnesse and sorrows among men, the death of some great woman, and doth withall threaten the losse of Cattel. *Mars* and *Jupiter* are chief Lords of this great eclipse: *Mars* in respect of the place eclipsed, and *Jupiter* in respect of the Angles preceding and succeeding. And it is well that *Jupiter* hath some dominion, *Mars* had else been of exceeding force, and more mischiefull then now I hope he will be: howbeit his power is neverthelesse very great, as being also chief ruler all the Spring quarter. He threatens contentions, warres, harm by fire, robberies, and divers other fearfull accidents: but *Jupiter* is for a mitigation of these mischiefs, striving by his benevolent influence to make them lesse. And yet *Mars* being in the eleventh House will scarce be perswaded from setting friends together by the ears; and so much the rather because the Luminarie eclipsed is in the Cuspe of that House, and in *Aries* the House of *Mars*. This eclipse is certainly a very great one, the effects whereof will continue in force till about the middle of *April* in the year of our Lord God 1654; and the places most like to feel them, are such as be under *Aries*, *Taurus*, *Libra*, *Cancer*, and *Capricorn*.

The next Eclipse visible to us is an Eclipse of the Moon, on the seventh day of *September*: it beginneth before the Moon riseth, viz. at 39 minutes past 4 in the afternoon. The middle is at eleven minutes past six, and the end at 45 minutes

minutes past seven. The Moon will therefore rise eclipsed, and be then in her greatest obscuritie: the whole continuance of which Eclipse, is three hours and four minutes. *Jupiter* is Lord of it; and note that the places most subject to the effects (which will last till the eighth day of *December* next after) be such as are under *Gemini*, *Sagittarius*, *Pisces*, and *Virgo*. *Proclus* saith, If the Moon be eclipsed (as now she is) in the last Decade of *Pisces*, that then she threatneth great robberies both by sea and land: For these be his words, *Latrocinia & rapinae terra marique promiscue minitatur*.

And thus much of the Eclipses visible this year to us in our Horizon; in speaking of the effects whereof, because I have named no particular place where they work, I shall supply that defect by setting down what countries, kingdoms, and cities are under every of the signes and planets. But first of the four Quarters of the year.

Of the four quarters of the year.

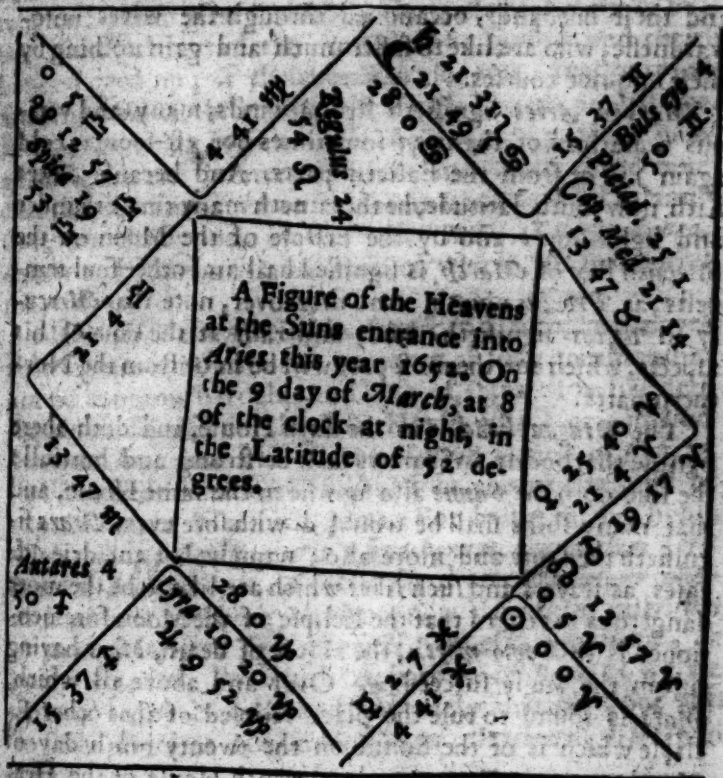

And first of the Spring.

IT being so that the World began at the *Vernal* Equinox, as is agreeable to the opinions of the old ancient Fathers, the naturall revolution of the year must needs be at the suns entrance into *Aries*; which will be this year on the ninth day of *March*, at eight a clock at night; at which time the 21 degree of *Libra* is found to be ascending, as in the Figure following may be seen. In which figure I find *Mars* to be chief ruler, with whom *Venus* and *Jupiter* have a share.

And

Dove 1652.

And note that this figure is onely for this quarter, because *Libra* (the signe ascending) is a moveable signe. There must be therefore for every Quarter a new figure: And first, see that which is for this.

This figure (as I said) will serve onely for this Quarter, and how the Planets are placed in it you may perceive.

Bees may thrive and prosper well enough, and so may all four-footed beasts of the lesser sort: but there is like to be

be a great mortallitie and decay of four-footed beaſts of the bigger ſort.

Women with childe ſhall have eaſie travell and good deliverie; but there is like to be many fornications and adulteries, much brawling and diſcord between women and their husbands, occaſioned through the wives untowardneſſe, who are like to ſuffer much and gain nothing by their unquiet courſes.

Mars in *Aries* ſignifieth ſtrong winds, many and various mutations of the ayre (ſometimes hot, eſt-ſoon as cold again) in or from the Eaſtern parts. And becauſe *Mars* hath now ſouth latitude, he thgathneth many times thunder and lightnings: and by the Eclipse of the Moon on the fifteenth day of *March*, is ſignified hail and other foul tempeſts, as *Proclus* ſaith. And moreover, note that *Mercury* in *Piſces* ſignifieth winds and rain at the time of his aſpects, which for the moſt part will be in or from the Northern parts.

The *Dragon's head* is in the ſixth Houſe, and doth there ſignifie ſhat bodily infirmities ſhall be ſtrong and hurtfull: the like doth the *Sunne* alſo ſignifie in the ſame Houſe, and that many folke ſhall be troubled with ſore eyes. *Mars* ſignifieth the ſame and more alſo; namely hot and drie diſeaſes, as feavers and ſuch like: which are like to be the more dangerous in regard that the Eclipse of the Moon forementioned is in *Domo mortis*, the Houſe of death, *Mars* having rule in the angle ſucceeding. Over and above all which, *Mars* is found to rule the place eclipsed of that other Eclipse which is of the *Sunne* on the twenty ninth day of *March*, and is in *Taurus* in the eleventh Houſe of the Heavens at the middle time of the Eclipse. By which (compared with his poſition in the Vernall figure, and by *Saturnus* being then in the ninth Houſe, with whom the Moon in *Cancer* is in conjunction) is ſignified not onely hot and ſharp diſeaſes, but alſo contentions among friends and others; cruelties, bloudſhed, harm by fire, robberies, fierce warres,

warres, imprisonment, depopulations of towns and villages, from whence the Natives shall depart (as *Holy* saith) and go to other places: And (as *Bonatus* telleth us) hypocrites shall abound, appearing outwardly in sheeps clothing, but inwardly shall be ravening wolves. Many shall be without pietie and mercie, and many shall change their religion: yea so great shall the wickednesse of some men be, that the sepulchres of the dead shall be spoiled, and their bones digged up; if those Authours say true. *Jupiter* is for a mitigation of these things; but will, I think, prevail but little, *Mars* being so powerfull: onely he may produce some good agreement between brothers and sisters. And note that the places most like to feel the smart of these sad calamities, are chiefly such as are under *Aries*, *Taurus*, *Libra*, *Cancer* and *Capricorn*: in some of which, these miseries may be.

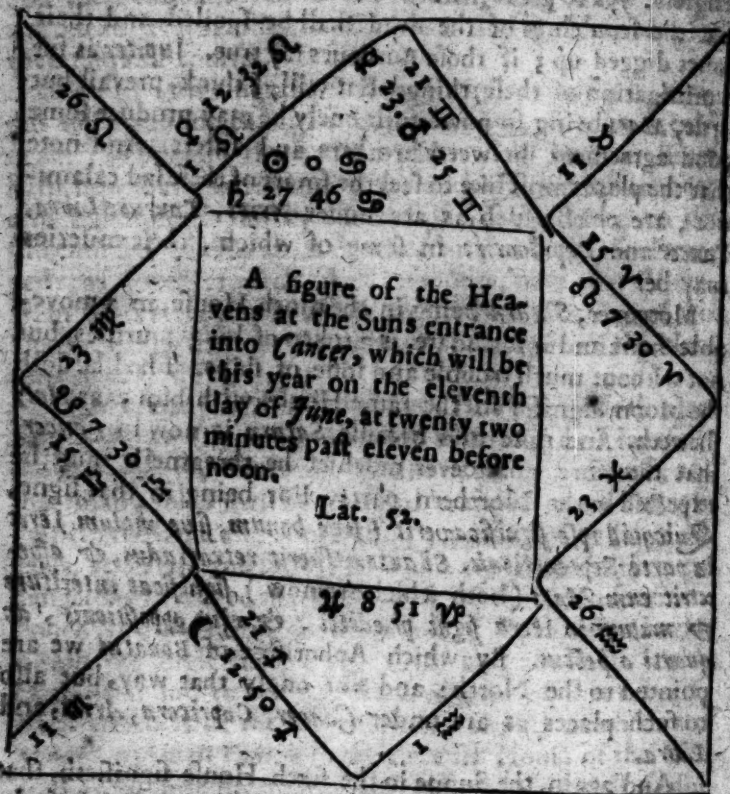

Moreover, *Saturn* being in the ninth House, in a moveable signe and infortunate, is a token of long journeyes, but not without much trouble and losse of ships. The like doth the Moon signifie in the same House with him, as *Holy* sheweth. And note also because *Saturn* is now in *Cancer*, that therefore whatsoever mischief he threatneth must be expected in the Northern parts. For being in that signe, *Quicquid ipse significaverit (sive bonum, sive malum) erit in parte Septentrionis. Si autem fuerit retrogradus, & aspexerit eum Mars* (both which are now) *significat interitum & malum in terra signi predicti, & eius oppositionis, ac quarti aspectus.* By which Aphorisme of *Bonatus* we are pointed to the North: and not onely that way, but also to such places as are under *Cancer*, *Capricorn*, *Aries*, and *Libra*.

And again, the Sunne in the sixth House signifieth, that the rude and ignoble sort of people shall envie and despise the higher ones: but the *Dragons head* in the same House signifieth the sublimitie and exaltation of the greater ones above them. And thus much for this quarter.

DOVE 1652.

Of Summer.

That quarter which we call Summer, begins at the sunnes entrance into *Cancer*: the figure of the Heavens then is as followeth.

Hot feavers are still like to be, by reason of the abundance of choler and bloud: as also inflammations and risings in the flesh; such as be wheals, pushes, breakings out, with

with pain in the ears. Four-footed beasts are yet scarce like to be fortunate, nor will adulteries and fornications be much lessened: for (as *Haly* noteth) men shall greatly give themselves to corporall vices against the law.

Saturns aspect will produce cold rain: but *Mars* at his aspects (by reason of his being in *Gemini*) causeth heat, hurefull thunders, rain and lightnings.

Know also that many deceivers are like to abound, and monies to be falsified by cunning Alchymists: Men shall be also apt to lay open both their own secrets, and the secrets of others, not well keeping either. Whips and imprisonment are threatned, and the halter like to catch more then ordinary, as is signified by *Mars* his being in *Gemini* and in the tenth house.

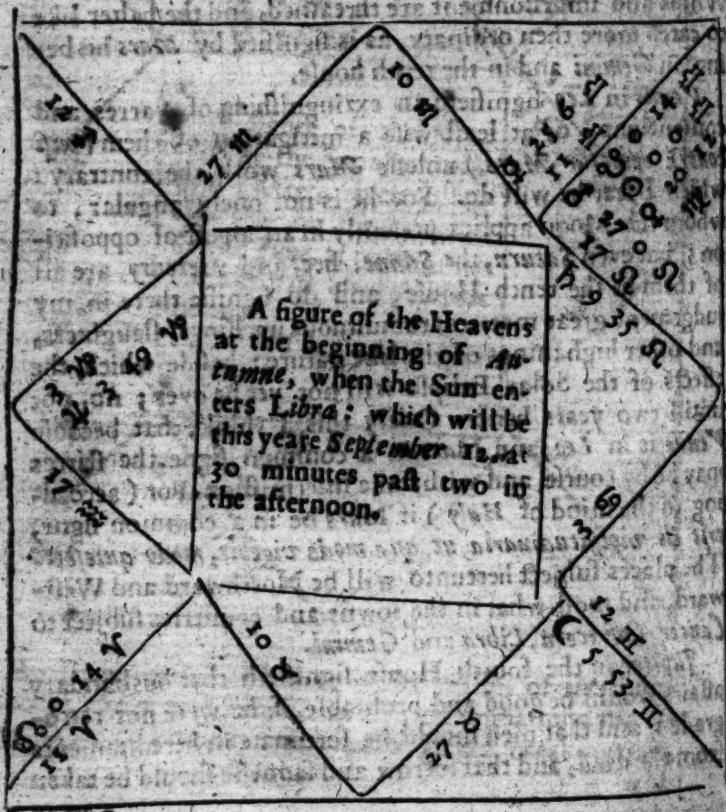

Venus in *Leo* signifieth an extinguishing of warres and contentions, or at least-wise a mitigation of them (*nisi contra operetur Mars*) unlesse *Mars* work the contrary: which I fear he will do. For he is not onely angular, to whom the Moon applies presently in an aspect of opposition; but even *Saturn*, the *Sunne*, hee, and *Mercury*, are all of them in the tenth House, and do signifie there in my judgement great matters, tumultuous uprisings, slaughters, and other high things of the like nature: beside which, the effects of the Solar Eclipse will not yet be over; no, not untill two years hence. Onely this I think, that because *Venus* is in *Leo*, and *Mars* in a common signe, the stirres may be by course and with some intermission. For (according to the mind of *Haly*) if *Mars* be in a common signe, *erit hic vicissitudinaria, ut que modo vigeat, modo quiescat*. The places subject hereunto will be Northward and Westward, and most what in the towns and countries subject to *Cancer*, *Capricorn*, *Libra* and *Gemini*.

Jupiter in the fourth House signifieth that husbandary affairs would be good and profitable, if he were not retrograde: and that men should be fortunate in hereditaments from the dead, and that sorrow and sadnesse should be taken away

Dove 11632.

away, *atque omne horribile*: All which is good if it might come to passe: but I much doubt it. For not onely is *Jupiter* retrograde, but the *Dragon's Tyl* is in the first House, which there signifieth detriment, dangers, and tribulations; and that the sonne remaining rich after the death of his father, shall be made poor; or if he be left poor that he shall so continue, as in *Bonatus* is observed. And thus much of the Summer.

Of Autumn.

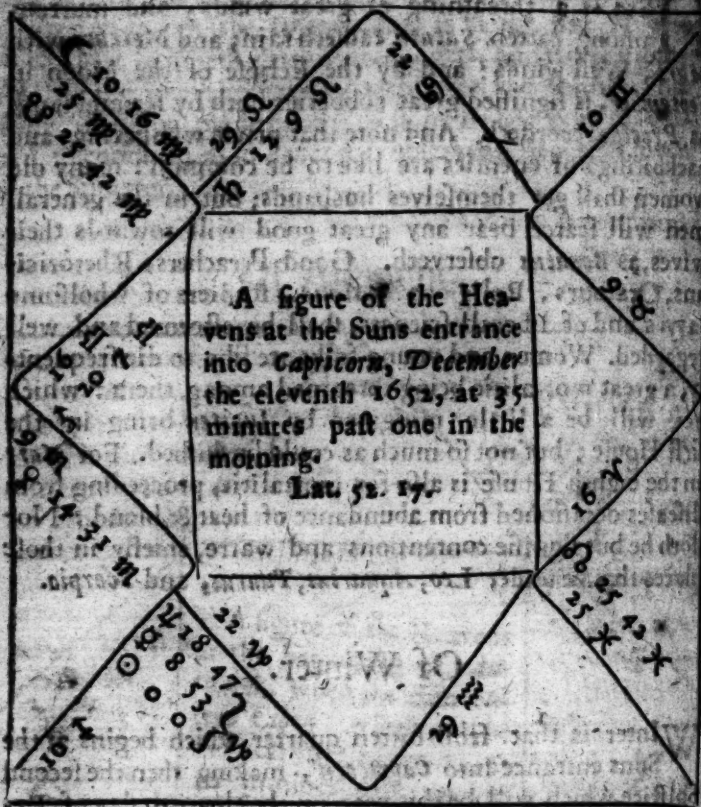

Dece: 1652.

Here is a threatening of great winds, and murrain among cattel. *Saturn* causeth rain; and *Mercury* with *Mars*, West winds: and by the Eclipse of the Moon in September, is signified great robberies both by sea and land, as *Proclus* recordeth. And note that privie whisperings and backbitings of enemies are like to be common: many old women shall get themselves husbands; but in the generall men will scarce bear any great good will towards their wives, as *Bonatus* observeth. Good Preachers, Rhetoricians, Oratours, Religious persons, studiers of wholsome lawes and of liberall sciences, shall be esteemed and well regarded. Women and young folks are like to die frequently, a great mortallitie being threatened among them: which yet will be a little mitigated by *Jupiter* being in the first House; but not so much as could be wished. For *Mars* in the eighth House is also for mortalitie, proceeding from diseases occasioned from abundance of heat & bloud: Nor doth he but signifie contentions and warre, chiefly in those places that be under *Leo*, *Aquarius*, *Taurus*, and *Scorpio*.

Of Winter.

Winter is that frost-bitten quarter which begins at the Suns entrance into *Capricorn*, making then the second Solstice which will be this year on the eleventh day of December, at 35 minutes past one in the morning. And now are the dayes at the shortest, but will begin to lengthen every day, though not perceived suddenly. And note that with us (at and about Cambridge) the shortest day is but 7 houres and 26 minutes long. But for this quarter see the figure following.

Dove 1652

of the year) signifie detriment, and losse of cattell of the bigger sort; though on the contrary, an increase of the lesser be still promised. We may have a good disposition of the aire, and a favourable Winter. Sicknesse, and robbery, & wars, are now like to be lessened; which (as *Bonatus* saith) is most of all to be considered in respect of the Northern parts: howbeit hot disputes are like to be by reason of religion, even among rich and great men.

This is all that for the present I thought fit to commit to publick view: not absolutely determining that such or such things shall be; but probably conjecturing that such or such things may be: and in some of those places that be under the signes already mentioned. In some I say, rather then in all. For God by his providence doth without all question dispose of the operation of his creatures, using them as instruments to all such purposes as shall agree to the counsel of his own will. Which being just and right, willeth that they be punished whose sinnes have called for his judgements; as appeareth even in the clouds of heaven, which (according to his decree) do disburden themselves of their weary drops rather here then there, or there then here: For saith the Lord in the fourth chapter of *Amos*, at the seventh verse, *I have caused it to rain upon one citie, and it hath not rained upon another, and the citie where it rained not was barren*: which barrennesse was certainly a punishment for the sinnes of the people dwelling there. For that the clouds have rain in them, proceeds from naturall causes; but that they emptie themselves upon one place rather then upon another, is from the providence of God. And so in this case: For it is true, that God Almightye having both set and foreseen the course of nature long before, doth now uphold it by his providence, instrumentally to perform his sacred will, disposing of what is wrought by his creatures to be altogether according to the councill thereof.

Divi 1632.

Of the Regions and Cities subject
to the Signes and Planets, and first
of those that be

Under *Aries* and *Mars*.

γ. ♂. Basternia, Syria, Palestina, England, France, Denmark, Germanie, Burgundie, Swedland. *And of Cities and Towns*, Naples, Ancona, Ferrara, Florence, Verona, Capua, Lindavia, Cracovia, Padua, Brunswick, &c.

Observations for Husbandmen

IN *January* take off superfluous branches from Fruit Trees, and prepare your ground for Gardens, uncover Tree-roots, cut your Vines in some of the Twelve dayes.

Set Quick-sets, Roses, Sallets in the moneth of *February*. And now cover up the Roots of your Trees with good Earth, which you opened before in the beginning of *January*.

In *March* you may Graft; but in Planting and Graving, chuse a warm time: whereof let not the wind be in the East or North, because such winds are commonly nipping, especially being helped by any aspect of the Moon with *Saturn* or *Venus* in cold Signes, as *Virgo*, *Capricorn*, *Taurus*, *Scorpio*, *Pisces*, or *Cancer*.

In the end of *April*, or beginning of *May*, set and sow tender Herbs and Seeds in your Gardens, in a good temperature of Aire.

Remove young Trees, either in the end of *October*, in *November*, or *February*, the moon increasing, and be sure to set that side South which was South before, because it cannot indure the cold North.

Geld Cattell, the moon in *Aries*, *Sagittarius*, or in *Capricorn*, being in her last quarter.

Gather all Fruit that you mean to keep, in a drie time, when the moon is at the full.

Sow all such Seeds as have round Roots (as Onions, Leeks, Turneps, &c.) either three or foure dayes before the full, or three or four dayes after the full.
